The SPOR Ecosystem

The Strategy for Patient-Oriented Research (SPOR) is a federal initiative about providing the evidence needed to inform the development of health policies and improve the health care system.

services professionals

+ fellows

Researchers + academic leaders

Administrators + policy-makers

Brain-based developmental

disabilities in children and youth

Its Guiding Principles

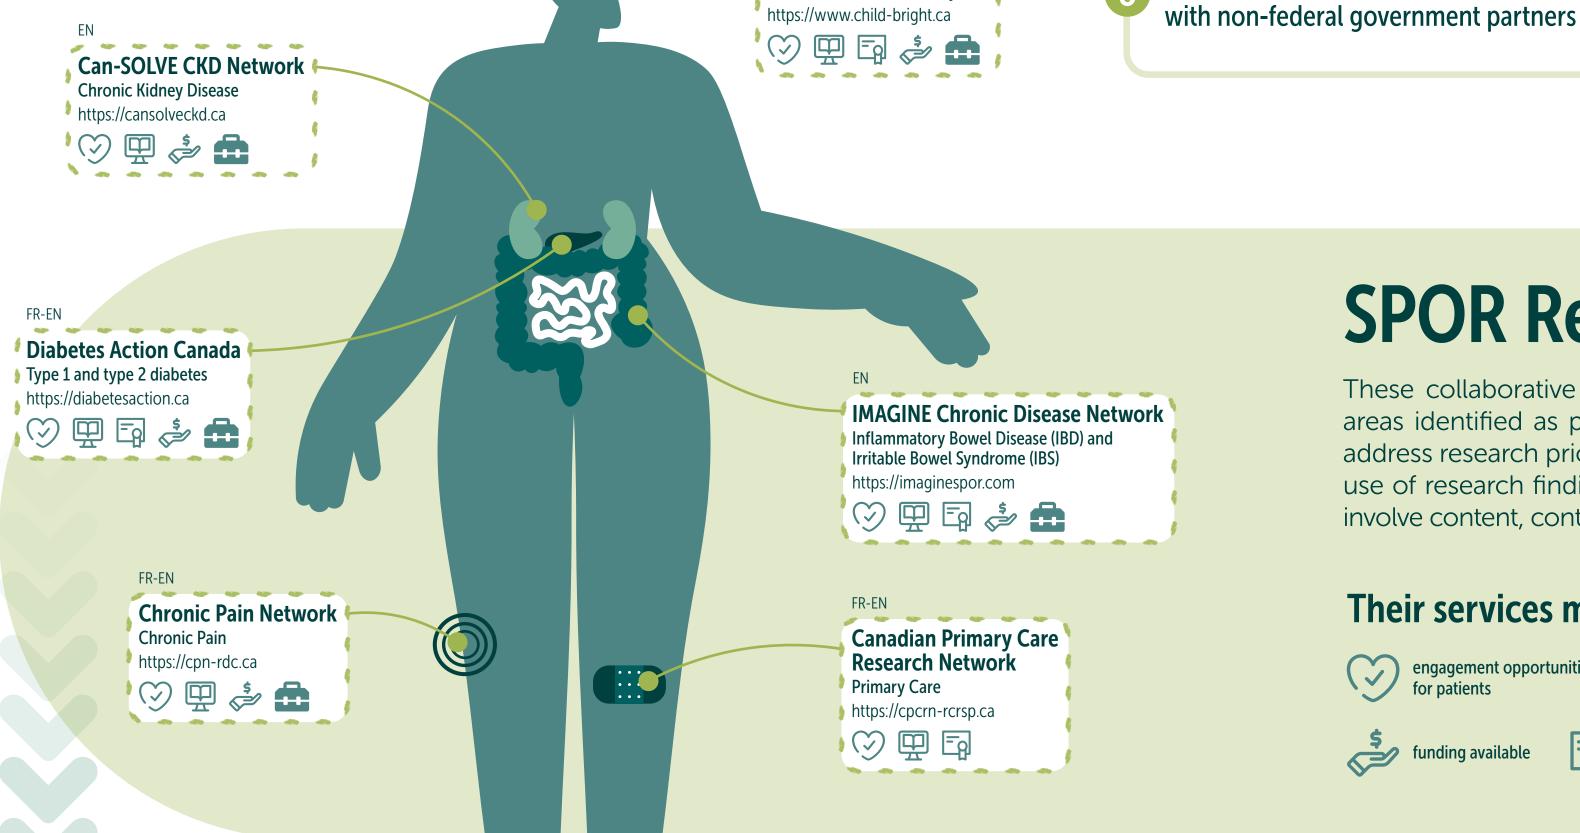

Decision-makers/clinicians involvement throughout the entire research process

Funding follows a 1:1 matching formula

Multi-disciplinary approach throughout the entire research process

Nation-wide

SPOR Research Networks

These collaborative research networks focus on specific health areas identified as priorities in multiple provinces and territories, address research priorities identified by patients, and speed up the use of research findings into patient care and health policy. They involve content, context, and lived experience experts and partners.

Their services may include

PASSERELLE SPOR National Training Entity

PASSERELLE is a National Hub dedicated to support and promote capacity development for POR. They maintain a central repository of POR resources, provide learning opportunities and pathways, support and empower trainees through scholarships and fellowships, provide consultation and guidance to teams and organizations, and support an active POR community.
